

What can you expect as a Patient and as a Referring Physician?

As a patient, you can expect the safest and least invasive treatment options tailored for you utilizing the latest technological advances proven effective in acute and chronic pain.

As a referring physician, you can expect a reliable partner to work with you in diagnosing and treating patients dealing with pain.

Why is Comprehensive Care the Best Treatment Approach?

Through an interdisciplinary approach to pain management, we provide comprehensive evaluation of our patients, factoring in physical, functional, emotional, and psychological needs. The medical team at the **Pain Management Center of Lansing** consists of board-certified pain management physicians, nurse practitioners, registered nurses, x-ray technicians, and medical assistants. All members work together to formulate and implement a comprehensive treatment plan to reduce pain and improve function.

GOALS OF TREATMENT

- Improving the patient's quality of life and function.
- Having all needs of a patient with pain treated in one location by many different professionals.
- Developing a coordinated, individualized treatment plan.
- Reducing suffering for the patient and family.
- Increasing activity levels of the pain patient with an active rehabilitation program.
- Decreasing depression, anxiety, and irritability.
- Helping the patient learn to control the pain rather than the pain controlling them.
- Reducing the cost of medical care by reducing hospitalizations and emergency room care.

Providing Comprehensive Pain Management Services to the mid-Michigan Area Since 1988

- **EVALUATION/CONSULTATION**
- **PAIN MEDICATION ANALYSIS/MANAGEMENT**
- **INTERVENTIONAL MANAGEMENT**
